Inspection

Type: ROUTINE INSPECTION

Date: DEC-08-2004

2.8

REPEAT NCI

NOTIFICATION OF CHANGE OF NAME, ADDRESS, CONTROL, OR OWNERSHIP OF BUSINESS.

Sec. 2.8 Notification of change of name, address, control, or ownership of business. REPEAT

A licensee shall promptly notify the AC Regional Director by certified mail of any change in the name, address, management, or substantial control or ownership of his business or operation, or of any additional sites, within 10 days of any change. The male lion cub (Bam Bam) is not at the facility today. When asked about the cub being housed at an employee's residence, the licensee stated this only continues to occur once in awhile. The licensee must notify the AC Regional Director via certified mail of any additional locations housing animals and such facilities must be inspected for compliance with the standards and regulations or the animal must be housed at the home facility. Number of animals affected: 01.

2.40 (a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

2.40(a)(1) Attending veterinarian and adequate veterinary care.

Each dealer and exhibitor shall employ an attending veterinarian under formal arrangements. In the case of a part-time attending veterinarian or consultant arrangements, the formal arrangements shall include a written program of veterinary care and regularly scheduled visits to the premises of the dealer or exhibitor. The facility has begun working with a different veterinarian. The original attending veterinarian has dissolved himself of the Program of Veterinary Care (PVC) with the licensee. The animals are receiving veterinary care and the new veterinarian has visited the home facility. However, there is no written PVC in place describing the following (including but not limited to) provisions for emergency care, capture and restraint method, provisions and methods of euthanasia, vaccinations schedule, and parasite control program. A written PVC must be provided. To be corrected by: January 10, 2005. Number of animals affected: 04.

3.127 (b)

3.127 (d)

FACILITIES, OUTDOOR.

3.127(b) Shelter from inclement weather.

Natural or artificial shelter appropriate to the local climatic conditions for the species concerned shall be provided for all animals kept outdoors to afford them protection and to prevent discomfort to such animals. Individual animals shall be acclimated before they are exposed to the extremes of the individual climate. There is not adequate shelter from inclement weather in the outdoor primary enclosure. Approximately 34 feet of the perimeter fence (side nearest the highway) has a

plastic tarp on it. This is not considered adequate protection from inclement weather. At the time of this inspection, Thunder, a juvenile tiger cub, is being housed between the primary enclosure and the perimeter fence. There is no protection from the weather in this area. Failure to provide adequate shelter can increase disease risks for the animals and does not provide for the comfort and well being of the animals. A short term solution shall be implemented immediately and the long term solution shall be implemented by January 10, 2005. Number of animals affected: 02.

3.127(d) Perimeter fence.

On or after May 17, 2000, all outdoor housing facilities (i.e., facilities not entirely indoors) must be enclosed by a perimeter fence that is of sufficient height to keep animals and unauthorized persons out. Fences less than 8 feet high for potentially dangerous animals, such as, but not limited to, large felines (e.g., lions, tigers, leopards, cougars, etc.), bears, wolves, rhinoceros, and elephants, or less than 6 feet high for other animals must be approved in writing by the Administrator. The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure must be approved in writing by the Administrator. Thunder, the juvenile tiger cub, is being housed in the area between the primary enclosure and the perimeter fence. This does not prevent contact between Thunder and any animals or unauthorized persons outside the perimeter fence. Also, there is no secondary containment system in place for Thunder. This is a physical hazard to the animal and to other animals and persons. To be corrected immediately. Number of animals affected: 01.

**3.128 REPEAT NCI
SPACE REQUIREMENTS.**

3.128 Space requirements. REPEAT

Enclosures shall be constructed and maintained so as to provide sufficient space to allow each animal to make normal postural and social adjustments with adequate freedom of movement. Inadequate space may be indicated by evidence of malnutrition, poor condition, debility, stress, or abnormal behavior patterns. The facility continues to have the same 20 foot by 10 foot primary enclosure and has the same four large felids. This does not provide adequate space for the species involved at this facility. These animals must have a structurally sound primary enclosure which provides them space to make normal postural and social adjustments with adequate freedom of movement. Number of animals affected: 04.

**3.131 (c)
SANITATION.**

3.131(c) Housekeeping.

Premises (buildings and grounds) shall be kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices set forth in this subpart. Accumulations of trash shall be placed in designated areas and cleared as necessary to protect the health of the animals. There is an accumulation of materials next to the garage. The materials include but are not limited to: unused rolls of fence, straw, a mallet, a bag of garbage, an ax, and garbage bags. These items are adjacent to the wall of the garage where the lion cubs are housed and within 20 feet of the outdoor enclosure. These materials can provide a harbor for pests and vermin. To be corrected by: December 15, 2004. Number of animals affected: 04.

END OF REPORT.
